CARE

- Always unplug candle before changing bulb or replacing fuse.
- Replace broken or non functioning bulb with 612 Vermont item # VT-1232-4R

TROUBLESHOOTING:

1. Candle Will Not Light

- LED May Be Burned Out
Try an LED bulb from another candle to determine if the candle or the bulb is the reason for the light to be out. This entire candle is warranted for 3 years, so be sure to reach out to us for warranty replacement inside of 3 years. Otherwise, replacement bulbs are available for purchase.
- Outlet May Be Faulty.
Try a different outlet in your home to ensure the trouble is not related to a bad outlet.
- Fuse May Have Blown
A bad fuse will typically be smoky or dark inside. Test fuse to be sure that it is working. If bad, replace with a 5 amp C-type fuse.

2. Timer Seems to be Incorrect (Not Working)

- This candle is equipped with an automatic 12 hour timer that is set the moment the candle is plugged into the outlet. Candle remains lit for 12 hours then turns off for 12 hours. Repeats daily. NOTE: The timer will reset when the unit is un-plugged.

3. Light Appears Dim

- This candle will appear brightest on two sides. Be sure that the LED bulb is positioned so that the filament is most visible toward the outside. Candle may need rotated a pinch to align the bulb properly with the window.

Still having issues? Please reference the warranty information.
